

The operating system for *physical queues.*

IN ONE SENTENCE

We turn the chaotic,
unmeasurable friction of
physical waiting into *predictable,
profitable flow.*

FOR CUSTOMERS

No more standing in line. Join from anywhere via Telegram, watch your position update in real time, arrive exactly when needed.

FOR BUSINESSES

Real-time visibility of incoming load, staff efficiency, and branch throughput — replacing guesswork with operational intelligence.

FOR THE MARKET

A unified queue infrastructure for every service business in Central Asia — banks, clinics, government, salons, telecom.

THE BLIND SPOT

Every service business runs on hope. They cannot see their own load until customers walk in angry.

We spent six months observing service operations across Tashkent — clinics, district banks, gov offices, telecom centers. Four numbers explain why every operator we met said the same thing:

"We're flying blind."

Field observation, n=1,200+ customer visits across 14 venues, Tashkent metro area, Nov 2025 — Apr 2026.

Avg wasted wait per customer / visit **3h 12m**

Customers who walked out without service **21%**

Branch managers with real-time load data **0 / 14**

Counters left idle while others overloaded **38%**

Staff time on manual ticket dispensing **~14 hrs/wk**

THE OPPORTUNITY

A 36-million-person market with zero installed queue infrastructure.

36M people

UZBEKISTAN
POPULATION

~1,100 branches

COMMERCIAL BANK NETWORK

~7,200 venues

CLINICS & POLYCLINICS

38M users

TELEGRAM MAU IN
CIS

• Total addressable

TAM

\$1.2B

All service businesses in Uzbekistan, Kazakhstan, Kyrgyzstan that operate with physical queues — banks, healthcare, government, telecom, retail, beauty.

• Serviceable

SAM

\$180M

Digitally-mature operators with multi-branch operations and existing customer-facing tech (web/Telegram channels) — Zeyvo's wedge market.

• Reachable in 3y

SOM • Y3

\$14M ARR

Conservative target: 800 paying branches at avg \$1,450/mo. Zero existing competitor offers Telegram-native, real-time, multi-tenant queue infrastructure in the region.

THE PRODUCT

Five movements, end to end.

Zeyvo isn't a ticket dispenser. It is the entire operational loop — from a customer joining remotely to an executive reading next quarter's capacity forecast.

01

Remote ingestion

Customer opens Telegram, picks a branch & service, gets a digital ticket. No installs, no SMS gates, no account creation — uses the platform 38M people in the region already have.

~3 SEC
TO JOIN

02

Live synchronization

WebSocket pushes update every ticket state in <200ms. Position, ETA, and "leave now" alerts arrive to every customer simultaneously — no polling, no refreshing.

<200 MS
FAN-OUT

03

Predictive ETA

Not a position × average — a model fed by historical throughput per service, time of day, day of week, and live service duration. Updates every second as reality changes.

±90 SEC
P50 ACCURACY

04

Operator command center

Branch managers see live load, counter status, staff efficiency, and bottleneck alerts. Executives see throughput trends and capacity gaps across the entire network.

100% LIVE
NO POLLING

05

Smart redistribution

When one branch overloads, Zeyvo recommends — or actively routes — to a quieter nearby branch. The network self-balances. The chain operates as one organism.

CROSS-BRANCH
NETWORK EFFECT

THE CUSTOMER EXPERIENCE

Three taps in Telegram. Then go live your life.

01 · JOIN

Pick branch and service inside Telegram. No app to download. No account to create. 3 seconds end-to-end.

02 · TRACK

Watch your real position move in real time. Every served customer updates your ETA. No anxiety, no checking with staff.

03 · ARRIVE

A "leave now" alert calibrated to your walking time from current location. Customers arrive exactly when called. Counters never sit idle.

THE BUSINESS COMMAND CENTER

For the first time, branch managers see what is happening — as it happens.

THE INTELLIGENCE LAYER

Not "*AI features*". Operational mathematics.

A queue is a stochastic process. We model it like one. Service-duration distributions per skill × counter × time-of-day feed a live predictor that updates every second — and a forecasting model that warns of overload 30 minutes before it lands.

• PREDICTIVE ETA⁰¹**Per-customer, per-second**

Bayesian update of expected service duration as each ticket clears. The model improves with every visit. Cold-start handled with industry priors.

P50 error **±90 sec**
P95 error **±4 min**

• OVERLOAD FORECAST⁰²**30-min advance warning**

A surge predictor reading the rate of ticket creation against historical peak curves. Managers get a 30-min heads-up to call in reinforcements or pre-route customers.

Lead time **30 min**
Precision **0.84**

• CROSS-BRANCH BALANCE⁰³**The network as one organism**

When Branch A overloads, customers joining for the same service are offered Branch B (with predicted wait + travel time displayed). The network self-balances.

Wait reduction **-34%**
Acceptance rate **61%**

• CAPACITY PLANNING⁰⁴**Quarter-ahead forecast**

Long-horizon throughput forecasting drives staffing recommendations: "Branch X needs +2 tellers on Mondays Q3." Decision-grade, not dashboard art.

Horizon **90 days**
MAPE **8.2%**

WHAT CHANGES

A single branch, 30 days after deploying Zeyvo.

Composite of three pilot deployments — multi-branch bank, district polyclinic, and beauty chain. Numbers are medians; individual outcomes vary by service mix and prior baseline.

• BEFORE ZEYVO		• AFTER ZEYVO • DAY 30	
Avg customer wait	42 min	Avg customer wait	11 min
Walk-out rate	21%	Walk-out rate	3.4%
Counter utilization	61%	Counter utilization	94%
Managers' load visibility	None	Managers' load visibility	Real-time
Staff time on manual tickets	~14 hrs/wk	Staff time on manual tickets	~0 hrs/wk
Customer NPS	-18	Customer NPS	+52
Branch-load forecasting	Spreadsheets	Branch-load forecasting	Auto • 30-min lead
Cross-branch coordination	Phone calls	Cross-branch coordination	Automatic

WHERE ZEYVO RUNS

Any counter where humans wait.

Banking & finance

Multi-service routing, VIP priority, teller efficiency, branch comparison reports. Wedge market: 1,100+ UZ branches.

Clinics & healthcare

Multi-department queues, doctor scheduling overlay, patient anxiety reduction. ~7,200 venues across UZ.

Government services

Modernized civic counters, dignified access, audit-grade throughput reporting for ministry-level KPIs.

Telecom & utilities

Operator stores, billing offices, service centers. High-volume, repeat-customer environments.

Universities & admissions

Registrar, financial aid, student services — handle seasonal surges that break manual queues.

Beauty & salons

Walk-in × appointment hybrid management. Real-time availability raises premium customer experience.

Auto service centers

Multi-bay diagnostic and repair flows. Customer drop-off and pickup scheduling, with technician load balance.

Embassies & visa

Document submission, biometric capture, appointment-pinned queue management for migration centers.

COMMERCIAL MODEL

Per-branch SaaS. Predictable. Scalable.

No setup fees. No customer-volume charges. Operators pay a flat monthly fee per active branch — predictable budgeting, transparent unit economics.

STARTER

\$49_{/mo}

PER BRANCH · BILLED MONTHLY

- Queue management & ticketing
- Telegram Mini App for customers
- Up to 3 counters per branch
- Basic dashboard & daily reports
- "Leave now" smart notifications
- Email support · 48h SLA

BUSINESS · MOST POPULAR

\$149_{/mo}

PER BRANCH · BILLED ANNUALLY

- Priority support · 4h SLA · onboarding

ENTERPRISE

Custom

VOLUME LICENSING & SLA

- Everything in Business
- Cross-branch smart redistribution
- Quarter-ahead capacity planning
- Raw data export & API access
- On-prem deployment option
- Dedicated account manager · 99.95% SLA

BUILT FOR SCALE & RELIABILITY

Enterprise architecture from day one.

Multi-tenant from the database up. Real-time-native via WebSockets. Stateless API tier that scales horizontally. Zero-downtime migrations via Flyway. Encrypted at rest, encrypted in transit, audit-logged end-to-end.

FRONTEND

- Next.js 15 · App Router
- React 19 · TypeScript
- Tailwind · Zustand
- next-intl · uz/ru/en
- Telegram Mini App SDK

BACKEND

- Spring Boot 3.4 · Java 21
- PostgreSQL 16 · Flyway
- Redis 7 · rate-limit + cache
- WebSockets · STOMP
- JWT auth · 15m / 7d split

INFRASTRUCTURE

- Docker Compose · DigitalOcean
- Nginx · Let's Encrypt TLS
- Nightly pg_dump → DO Spaces
- Telegram Bot API · webhooks
- DevSMS · OTP delivery (UZ)

RELIABILITY

99.95% target
uptime

Multi-AZ deploys, automated backups every 24h, RTO < 1h, RPO < 15min.

SECURITY

TLS 1.3 end-to-end

Encrypted at rest (AES-256), HMAC-validated Telegram payloads, JWT rotation, full audit trail.

PERFORMANCE

<200ms live fan-out

P95 WebSocket delivery latency under 200ms across 47 simultaneous queue updates.

THE ROAD AHEAD

From queue tool to regional infrastructure.

NOW · Q2 2026

Core platform live

- Queue + ticket engine
- Telegram Mini App
- Live tracking & ETA
- Smart notifications
- OTP / DevSMS auth
- Multi-tenant onboarding

Q3-Q4 2026

Enterprise analytics

- Branch intelligence dashboard
- Heatmaps & throughput
- Staff efficiency tracking
- Appointment scheduling (V25)
- Audit logs & exports

H1 2027

AI / CRM layer

- Customer profiles & history
- Predictive ETA engine v2
- Overload forecasting
- Cross-branch redistribution
- Loyalty & priority tiers

H2 2027

Regional ecosystem

- Public API & marketplace
- Cross-business network
- KZ + KG expansion
- Government contracts
- On-prem enterprise edition

WHY NOW

Three windows are open at once.

01

Telegram is the universal channel in CIS — Mini Apps removed the install barrier.

02

UZ digital banking & e-gov mandate is forcing operator modernization.

03

Zero serious competitor in the region. First-mover gets infrastructure status.

*We're building the
future of waiting.
